To Whom It May Concern:

rp-squared (rp²) has implemented several workshops for well planning and optimization of drilling programs. The workshops include very diverse nationalities and both offshore and onshore teams.

The workshops and resultant updates to the programs have delivered exceptional benefit in actual time and cost savings, as well as a more safe and controlled work plan.

The optimizations included 5%-10% reduction in procedural efficiency timing for Riserless drilling, and several \$MM savings in offshore input to execution plans.

I can highly recommend partnering with rp² for early planning and successful delivery of well programs.

Sincerely,
