

30th June 2014

To whom it may concern,

Having worked with rp2 team on the BP contract over the past 2 years both onshore and offshore on the rig I can only say it has been of a great benefit to the drilling operation and would recommend rp2 to any operation.

From onshore it was great to be kept up to-date with in the morning meetings during the video conference call, this was captured by rp2 on a projector screen leaving no one in doubt the latest up-date Information on Safety, Operations and Logistics, Mike Fraser did an excellent job of this as he has been in the Industry long enough to make good judgment calls and provide excellent support for Operations.

Your offshore Team of Anri and Indra provided great support to the COSL BOSS Team, keeping track of operations, recording lessons learnt and providing solutions for improvement as each well developed.

The Technical Results Report at the end of each month made very clear understanding of how we stood as a Drilling Contractor and gave us a very clear base line on what we should be aiming for.
